Projects

- **CYBER BULLING TWEET CLASSIFICATION(Machine Learning):**   *Nov 2021-Present*
  - Cyberbullying tweet classification refers to the task of automatically categorizing tweets into different classes based on whether they contain cyberbullying or not. It is a text classification problem where the goal is to develop a machine learning or natural language processing (NLP) model that can accurately identify cyberbullying content in tweets.
- **ONYXSHOP(HTML,CSS,JAVASCRIPT):**   *Dec 2023-Present*
  - Online shopping sites have revolutionized the way people shop, providing convenience, a wide range of products, and access to global markets. This abstract explores the concept of online shopping sites, highlighting their key features, benefits, and challenges.
- **NUMBER PLATE DETECTION(Machine Learning):**   *April 2023-Present*
  - Number plate detection is a crucial task in the field of computer vision with numerous applications ranging from traffic enforcement and toll collection to surveillance and parking management. This process involves identifying and localizing vehicle number plates within images or video frames.
